

Treating Autism ...because Autism is Treatable

Dear Doctor,

You are receiving this copy of *Changing the Course of Autism: A Scientific Approach for Parents and Physicians* by Dr. Bryan Jepson because the person giving it to you would like to help their child who struggles with autism.

Dr. Jepson was keynote speaker at *Treating Autism's Second International Biomedical Conference*, held in March 2009, and all delegates were given a copy of his book. Many of our delegates were medical professionals and **our conference was awarded ten credits (code 46479) by the Royal College of Physicians.**

As you are no doubt aware, the numbers of children being diagnosed with autism are steadily increasing. Very sadly, the United Kingdom has the highest rate of autism in the world. Although research is lagging behind this epidemic, there is increasing evidence showing that children with autism suffer from sharply increased levels of gastrointestinal, immune function and detoxification problems. Many physicians and other health care professionals have already started to help parents to address these medical problems with their children. At our March 2009 conference, delegates were able to hear stories about children with autism experiencing life-changing improvements to health because of biomedical interventions—some to the point of losing their diagnosis.

*Treating Autism*, a charity in the UK, is currently in negotiations with the Department of Health, attempting to make research and proven clinical approaches more widely available to professionals working with the NHS and the people they serve. We hope you choose to read this book as an introduction to the possibilities of offering your patients with autism an improved quality of life.

If you would like to know more about biomedical approaches to autism and the research and clinical outcomes that support these interventions, please contact us at [TreatingAutismUK@aol.com](mailto:TreatingAutismUK@aol.com) and we will be pleased to provide you with more information or put you into contact with medical professionals who already utilize biomedical approaches to autism with success.

Sincerely,

The Directors of *Treating Autism*
